3. PRODUCTION LINES NO. 1, 4, AND 6

Summary Description

The following is a narrative description of the No. 1, 4, and 6 production lines regulated in this Tier I operating permit. This description is for informational purposes only. The Line No. 1 fryer was initially permitted as the Line No. 5 fryer in PTC No. 027-00009, dated December 31, 1997, and will be referred to as Line No. 1 throughout this operating permit unless otherwise noted.

The plant has three processing lines (No. 1, 4, and 6) located in Plant 2, each equipped with a blancher, a dryer, and a fryer. The Line No. 1 dryer and fryer were installed in 1995 and 1998, respectively; Line No. 4 dryer and fryer were installed in 1972 and 1970, respectively; and Line No. 6 dryer and fryer were installed in 1968 and 1970, respectively. The rated capacities of the Line No. 1, 4, and 6 dryers are 5.5, 16, and 28 MMBtu/hr, respectively. The rated capacities of the Line No. 1, 4, and 6 fryers are 75,000; 260,000; and 270,000 pounds per eight-hour shift. Each dryer is typically one large unit that is vented directly to the atmosphere. The fryers are primarily vented to a wet electrostatic precipitator. Table 3.1 lists the unit numbers associated with each unit.

4. STEAM GENERATING PLANT

Summary Description

The following is a narrative description of the steam generating plant regulated in this Tier I operating permit. This description is for informational purposes only.

The steam generating plant consists of three natural gas-fired boilers that supply steam to the potato processing plant and the ethanol plant. The Kewanee boiler (Unit No. S-C-B8) was installed in 1966 and has a rated capacity of 80.8 MMBtu/hr. The remaining two boilers are both Cleaver-Brooks boilers with rated capacities of 99 MMBtu/hr. The first Cleaver-Brooks boiler (Unit No. S-C-B9) was installed in 1969, and the second Cleaver-Brooks boiler (Unit No. S-C-B10) was installed in 1972. There are currently no control devices on the boilers.

5. HEATER S-C-H5

Summary Description

There is one natural gas-fired heating unit (S-C-H5) used to heat the plant that does not qualify as an insignificant activity. This heater has a rated capacity of 10.1 MMBtu/hr and was installed on January 15, 1991. Emissions from the heaters are released to the atmosphere through room vents. Combustion emissions for the heaters are based on continuous operation at burner capacity, assuming all emissions are released to the atmosphere.

Table 5.1 contains a summary of the requirements that apply to the heater.

6. BIOGAS UNIT

Summary Description

Gases produced by the ADI-BVF anaerobic digester at the wastewater treatment facility are referred to as biogases. The biogas primarily consists of methane, carbon dioxide, and hydrogen sulfide (H₂S). These gases are collected and routed to a waste flare (Unit No. S-C-BF) equipped with a natural gas-fired pilot light. The flare combusts the biogas to form carbon dioxide, sulfur dioxide, and water, which are vented to the atmosphere. The ADI-BVF anaerobic digester and biogas flare were initially permitted for construction in PTC No. 027-00009, dated December 17, 1997. The PTC was amended on December 10, 2001, and was later incorporated into PTC No. P-030014, dated October 17, 2003, as a permit revision.

Table 6.1 contains a summary of the requirements that apply to the biogas unit.
